

# Finding Solutions for Life-Altering Health Conditions

Praxis Spinal Cord Institute leads global collaboration in spinal cord injury (SCI) research, innovation and care. We engage people with SCI and other world-class experts to work together to identify, prioritize and solve the most urgent challenges.

## Market-Ready Solutions

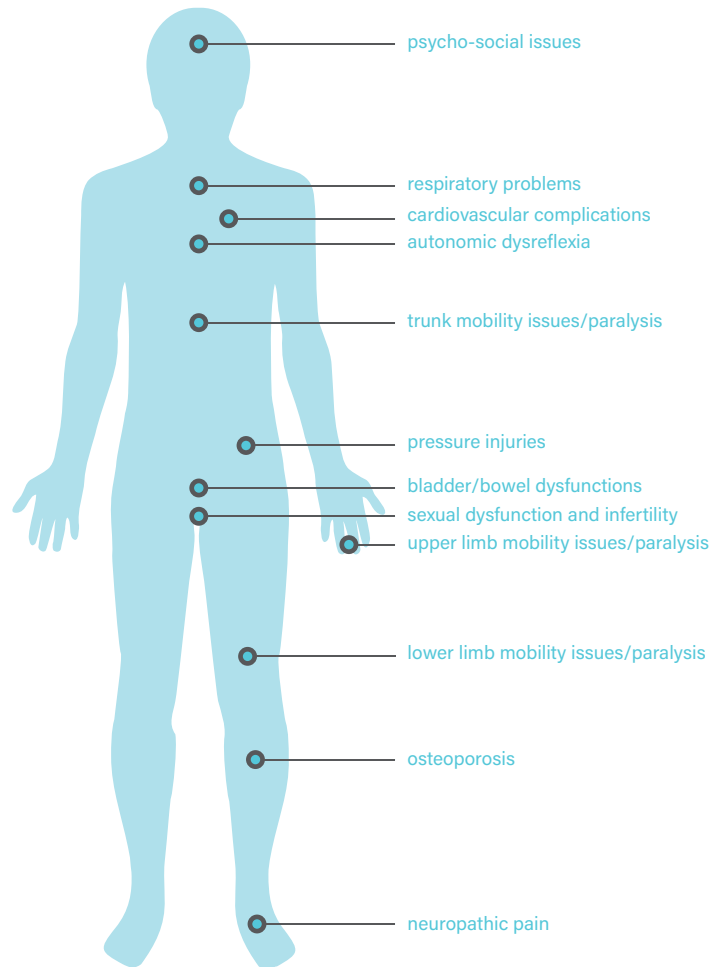

Praxis identifies and supports the development of therapies and medical devices that address the most common secondary health complications. By acting as a catalyst for the most innovative and promising technologies, we derisk the research and advance the science to bring these technological solutions to market.

## Improving Lives

People with SCI can expect to experience multiple complications that arise as a result their injury. These complications have devastating long-term consequences, impacting individuals' ability to work, financial status, family relationships, community participation, mental health, quality of life, and costs to the healthcare system. Praxis is focused on accelerating technologies that reduce the occurrence of secondary complications, especially in the areas of **pressure injuries**, **bladder infections** and **neuropathic pain**.
